

Conveyor

Model:
Conveyor

Material:
Painted or stainless

Conveyor belts are used for transport of mixed cargo or bulk goods - including vegetables - from one point to another - The transport is either horizontal, rising or falling. The machine consists of the following main components: Frame built from steel, drive- and turn-drum placed at each end of the conveyor, a propulsion unit - most often an electric motor - and an endless vulcanised conveyor belt of either rubber or PVC.
