

Felt drier

Model:
Felt drier

Material:
Painted or stainless

EKKO felt drier is a drying machine for potatoes and other root crops. The machine is equipped with rollers covered with felt, which will suck water from the surface of the product. This water is squeezed out again by adjustable pressure rollers and drained off through a channel to either side. The pressure rollers are equipped with separate springs, which provides a uniform and very effective drying. The machine is available in right or left version. Inlet, outlet, and supports can be adapted to any installation.

Standard

Model	Dimension	Capacity t/h
EM1975	500 mm wide 7 rollers	4
