

# Watersilo

**Model:**  
Watersilo

**Material:**  
Painted or stainless

The purpose with the Water silo is to soften potential soil on the vegetables, before it is being conveyed to another destination. The vegetables are being unloaded in the silo, and stay there for a suitable time. Then it is being conveyed with the elevator to a destination with often is a washing machine. The machine consist of following main components: Frame build from steel, drive- and turn-drum placed at each end of the conveyor, a propulsion unit - most often an electric motor - and an endless vulcanized conveyor belt of either rubber or PVC.

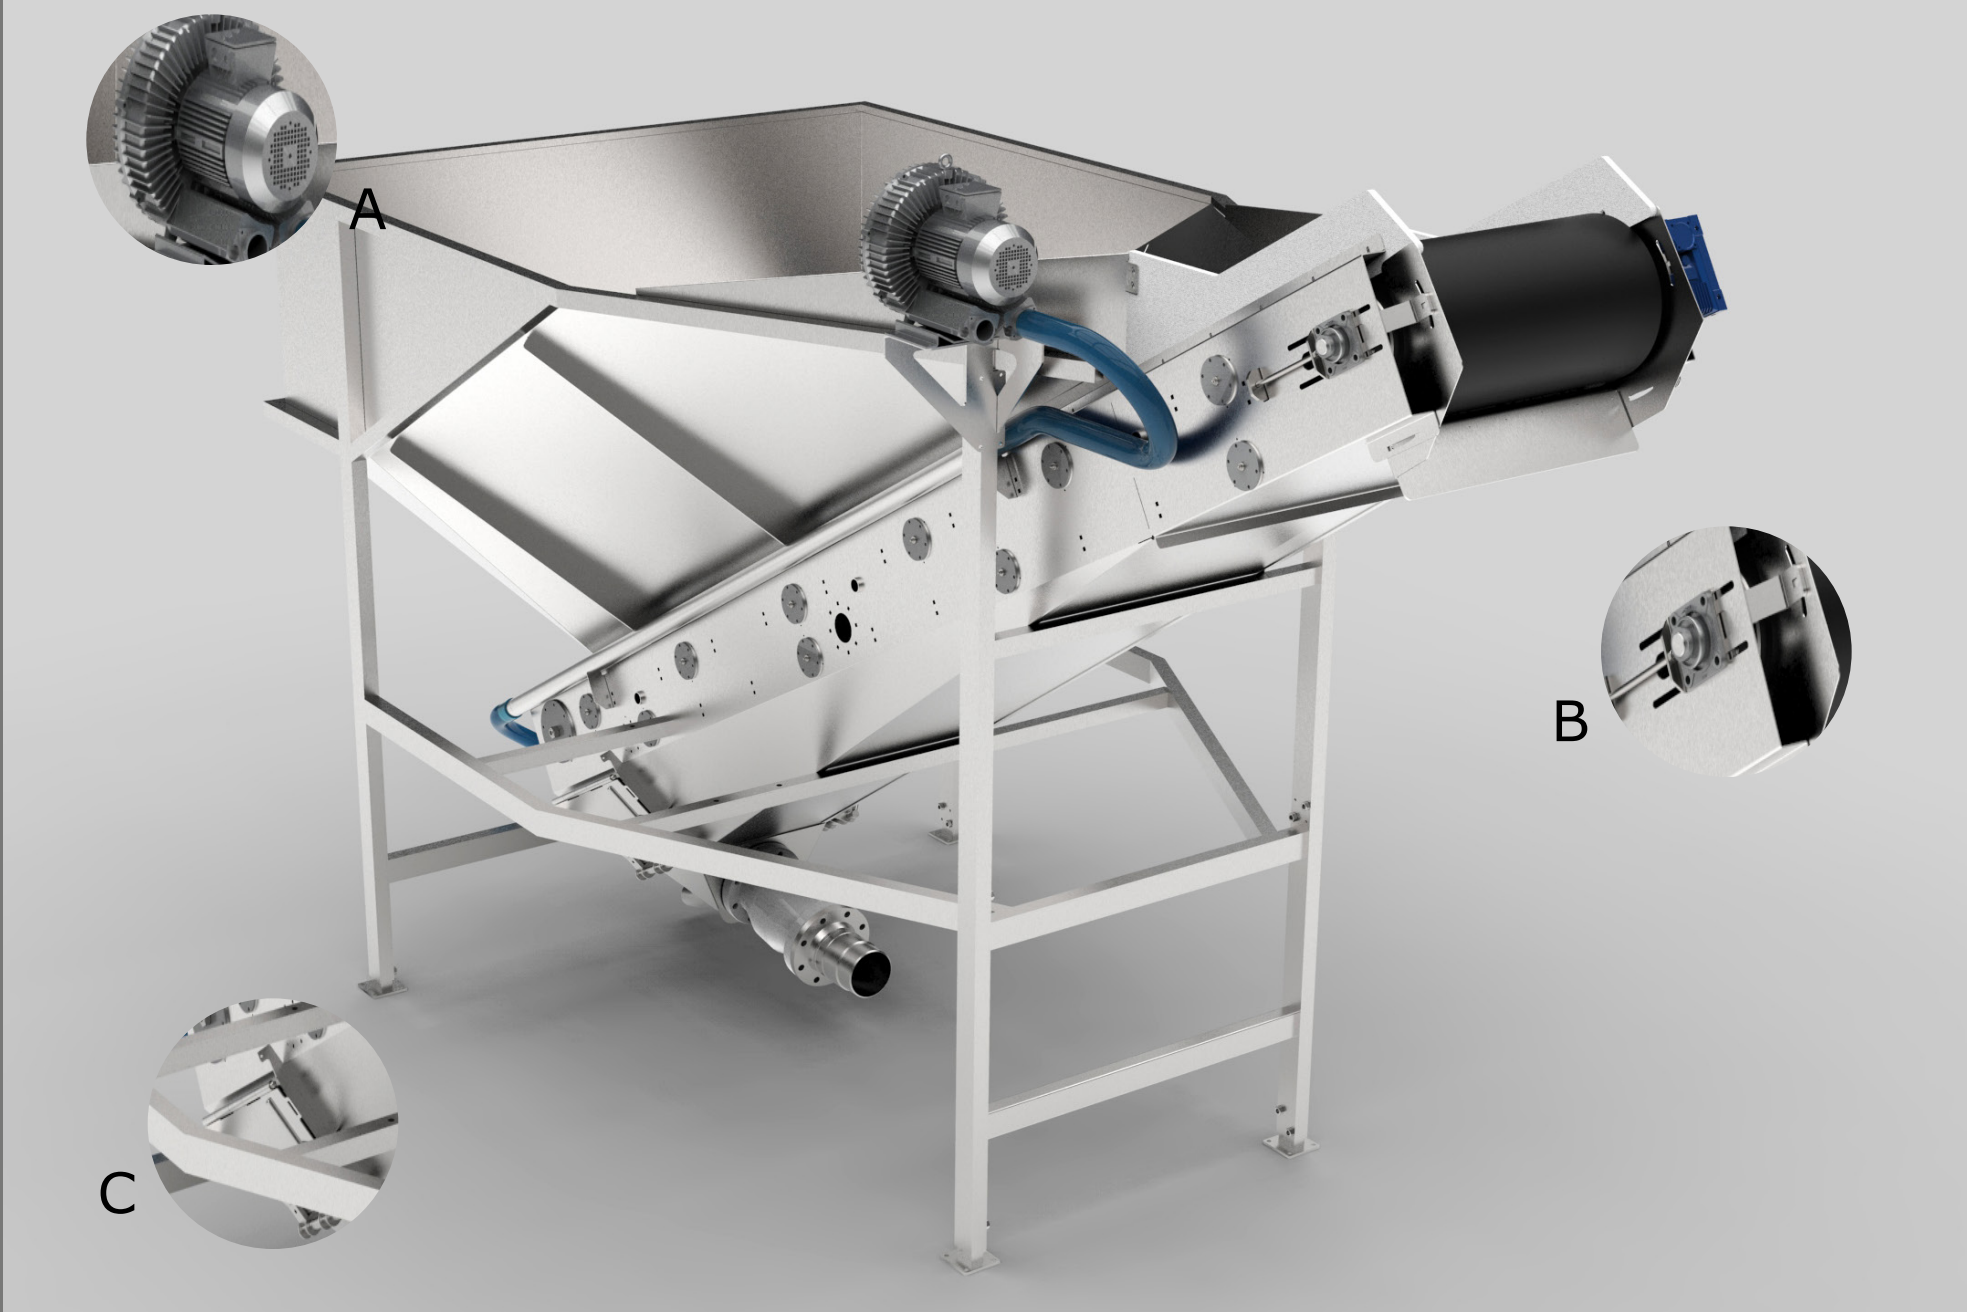

## Standard
